

Solution Requirements

Date	3 July 2026
Team ID	XXXXXX
Project Name	Emotion Support Engine
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Core AI Chat Interface	Process user text input and generate empathetic responses using the Google Gemini API.	High
2	Session Management	Allow users to securely start, end, and clear their chat sessions.	High

3	Data Logging	<i>Save conversation histories so users can reflect on their past sessions.</i>	Medium
4	Multilingual Support	Allow users to interact with the support engine in multiple languages.	Low

Step 2: Non-Functional Requirements (NFR)

1	Performance & Speed	The AI must respond to user input within 3 to 5 seconds to maintain a natural conversational flow.	High
2	Security & Privacy	All user inputs and chat logs must be handled securely to ensure strict user confidentiality.	High
3	Usability (UI/UX)	The interface must be clean, calming, and easily accessible across both mobile and desktop browsers.	High
4	Availability	The application should aim for 24/7 uptime so users can access support late at night or during emergencies.	Medium
