

Technology Stack

Date	3 July 2026
Team ID	XXXXXX
Project Name	Emotion Support Engine
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology stack details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Streamlit	Provides a fast, interactive, and seamless way to build a clean web interface entirely in Python without needing external HTML/CSS.

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	Python 3	Acts as the core programming language handling user inputs, data routing, and API interactions.
3	AI Engine / API	Google Gemini API	Powers the core generative AI features, providing real-time emotion analysis and empathetic conversational responses.
4	Version Control	Git & GitHub	Used for source code management, tracking file changes, and safely storing the project repository.
5	Cloud Deployment	Streamlit Community Cloud	Hosts the live web application securely so users can access the Emotion Support Engine from their browsers.
