Project Title	Emotion Support Engine
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform how individuals access immediate emotional comfort using generative AI, boosting accessibility and conversational empathy. It tackles the lack of late-night support and affordable therapy, promising better mental well-being, immediate stress relief, and happier users. Key features include an AI-based conversational model and real-time empathetic response generation.

Project Overview	
Objective	The primary objective is to revolutionize accessible emotional support by implementing advanced generative AI techniques, ensuring faster, non-judgmental, and highly empathetic conversational assistance.
Scope	The project comprehensively assesses and enhances the way users process their daily stress, incorporating a secure web application and AI for a robust, 24/7 support system.
Problem Statement	
Description	Inaccessibility and high costs in current traditional mental health avenues leave many individuals feeling isolated and overwhelmed during late-night hours or moments of sudden anxiety.

Impact	Solving these issues will result in immediate emotional grounding, reduced feelings of isolation, and an overall enhancement in personal well-being, contributing to user satisfaction and mental clarity.
Proposed Solution	
Approach	Employing generative AI (Google Gemini API) to analyze user input and provide conversational empathy, creating a dynamic, accessible, and safe space for emotional expression.
Key Features	- Implementation of a real-time, AI-based empathetic chatbot. - A clean, accessible, and secure user interface for confidential journaling and chat.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard Cloud CPU (Streamlit Community Cloud) - No local GPU required as AI processing is handled via Gemini API.
Memory	RAM specifications	2 GB - 4 GB RAM
Storage	Disk space for data, models, and logs	models, and logs5 GB - 10 GB SSD (Minimal storage needed since no local models are hosted).
Software		
Frameworks	Python frameworks	Streamlit
Libraries	Additional libraries	google-generativeai

Development Environment	IDE	VS Code / GitHub Codespaces
Data		
Data	Source, size, format	Real-time user text inputs (Prompt data). No static datasets (like Kaggle or CSV) are required for training because the pre-trained Google Gemini API is utilized.
