

Solution Architecture

Date	4 July 2026
Team ID	XXXXXX
Project Name	Emotion Support Engine
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the clean, web-based user interface where users type their messages and read the AI's empathetic responses.	Streamlit
API Gateway / Server	Hosts the web application, routes user requests to the backend logic, and securely serves the app over the internet.	Streamlit Community Cloud
Application Logic & AI	Processes user input, structures the prompt, and communicates with the external AI model to generate real-time responses.	Python 3, Google Gemini API
Data / Storage Layer	Manages short-term memory by temporarily storing the active chat logs so the AI remembers the context of the conversation.	Streamlit Session State (<code>st.session_state</code>)
