

Project Executable Files

Date	04 July 2026
Team ID	xxxxxx
Project Name	Emotion Support Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / environment dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (i.e. secrets.toml / .env)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes

S.No	Item to Submit	Submitted (Yes / No / NA)
10	Demo video or walkthrough (if required)	Yes (<i>Change to NA if you didn't record a video</i>)

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Emotion_Support_Engine/

|— .streamlit/

| |— secrets.toml # Secure configuration file for API keys

|— app.py # Main Streamlit application source code

|— requirements.txt # List of Python dependencies

|— README.md # General project setup and run instructions

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	[Insert your live Streamlit Community Cloud link here, if deployed]
Login Credentials (Demo)	Not required (The application allows anonymous, secure access).
Platform / Hosting Provider	Streamlit Community Cloud
Repository Link	[Insert your GitHub repository link here]
Demo Video Link	[Insert your demo video link here, or write NA]

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Clone the repository to your local machine: `git clone [your-repo-link]`
2. Open your terminal and navigate to the project folder: `cd Emotion_Support_Engine`
3. Create and activate a virtual environment: `python -m venv venv` followed by `venv\Scripts\activate` (Windows).
4. Install the required dependencies: `pip install streamlit google-generativeai`
5. Create a folder named `.streamlit` and add a `secrets.toml` file inside it containing your Gemini API key: `API_KEY = "your_actual_key"`

6. Start the application: `python -m streamlit run app.py`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	API Rate Limits / Timeouts: If too many requests are sent rapidly, the free Gemini API may temporarily block them.	Workaround: Implemented error handling. Users are prompted to wait a minute and try again.
2	Latency on Complex Inputs: Very long paragraphs take slightly longer for the AI to analyze and respond to.	Workaround: Added Streamlit loading spinners so the user knows the AI is actively "thinking."
